Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a controller configuration, classified in class 340, subclass 310.01.
- II. Claims 10-17, drawn to a system for monitoring electrical devices, classified in class 340, subclass 600.
- III. Claims 18-19, drawn to a system for remotely interacting with control modules, classified in class 340, subclass 825.54.
- IV. Claims 20-22, drawn to a method of programming a logic controller, classified in class 340, subclass 540.
- V. Claims 23-31, drawn to a method of monitoring a failure of electrical devices, classified in class 700, subclass 16.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a controller configuration not using the specific monitoring system of II, the remote control system of III, the programming method of IV, or the failure monitoring method of V; invention II has separate utility such as a monitoring system not using the a controller configuration of I, the remote control system of III, the programming method

of IV, or the failure monitoring method of V; invention III has separate utility such as a remote control system of III not using the controller configuration of I, the specific monitoring system of II, the programming method of IV, or the failure monitoring method of V; invention IV has separate utility such as a programming method not using the controller configuration of I, the specific monitoring system of II, the remote control system of III, or the failure monitoring method of V; invention V has separate utility such as a failure monitoring method not using the controller configuration of I, the specific monitoring system of II, the remote control system of III, the programming method of IV. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
